

# *In Memorium*

In 1950 a chemist by the name of Hy Earn made a major contribution to the agricultural industry by inventing an ointment for chickens, preventing their cannibalistic tendency from a protein deficiency.

Earn's discovery was a success in the poultry industry, which later led to the creation of the family owned and operated, Dominion Veterinary Laboratories Ltd.

Today, as a direct result of Hy Earn's achievements, family, and work ethics, Dominion Veterinary Laboratories Ltd. has a wide spectrum of products for the livestock industry. More than one hundred drug formulas continually contribute to the high standards of Canada's, and international agriculture industries.
